

Condition Monitoring – Remote Sites

It is a simple fact that “ATTENTION TO THE BASICS UNDERPINS ECONOMIC AND EFFECTIVE ASSET MANAGEMENT, SAFETY, RELIABILITY AND CUSTOMER SATISFACTION”

By not maintaining assets or adequately conducting simple condition monitoring regimes, a business may in the short term save money, but, for business where fiscal efficiency, safety and customer retention is critical to long business viability, cutting corners or simply failing to recognise the importance of basic maintenance regimes should not be considered an option because:-

- It undermines network and service reliability
- It often leads to safety or network issues
- It will lead to higher cost of operation through increased avoidable and more substantial maintenance costs
- It reduces capital asset life (we all know what a positive effect asset life extension can have on the bottom line)
- It creates customer dissatisfaction
- It can lead to due duty of care issues.
- It can result in high media visibility failures impacting your company's public and city image!

The above are only a few reasons that the businesses engaging Firstcall Support Services Ltd fully appreciate. Basic condition monitoring maximises the benefits and minimises the negatives. And, believe it or not, this approach is not as costly as one may think, prices

start as low as **£95*** / site and secure the following benefits:-

Typical Benefits:-
